

23 January 2017

Subject: Notification of information about production level

To: President
The Stock Exchange of Thailand

With reference to our communication dated 6 December 2016, We would like to inform that the Company has implemented action plan to further improve the emission of carbon disulfide (CS₂) and hydrogen sulphide (H₂S), to address the issues raised earlier by a few community members and some section of media, even though these were well below the statutory limits. The provincial industry office along with the members of five sector committee have verified the improvements. The Company has been allowed to increase production to run at 80% level on trial basis from existing level of 50% level with immediate effect for 20 days subject to maintaining acceptable level of odour. The Company shall further request permission to increase production to full capacity after above 20 days period and will inform further developments.

We would like to confirm that the Company meets all statutory emission norms and we are in full compliance with laws relating to factory operation.

Please be informed accordingly.

Yours faithfully,
For Thai Rayon Public Company Limited

Mr. Prasan Sipani
President
